

I am a subscriber to XM Radio. They provide a great variety of news entertainment and music to their subscribers. A new feature that I use is the weather and traffic channels. They provide a service thats more timely, and complete than regular broadcast radio. I have chosen XM over broadcast radio and their commercials. Now the National Association of Broadcasters wants to limit what I listen to over XM. They are apparently scared of XM's success so the way they compete is to lobby for legislation to limit XM's success. That's not what the American public wants. We want to have choices in what we listen to and not be limited by legislation thats basis is to protect Radio stations from competition.

Good government listens to its public and makes decisions based on whats best for the greater good and not what benefits the few who are only trying to protect their turf. I urge to deny NAB's petition 04-160 to limit XM radio
